SUMMARY

Data Engineer with hands-on experience building, migrating, and troubleshooting enterprise ETL pipelines and data warehousing workflows in a banking data environment. Skilled in Apache Spark, Apache Iceberg, Hive HQL, and Apache Airflow, with experience converting legacy Hadoop-based pipelines to modern cloud data platforms. Proficient in SQL, Linux shell scripting, and Kubernetes-based data processing, with a track record of diagnosing and resolving production ETL failures through root-cause analysis.

TECHNICAL SKILLS

Data Engineering: Apache Spark, Apache Iceberg, Hive HQL, ETL/ELT pipeline design & migration, data warehousing
Orchestration & Scheduling: Apache Airflow, Control-M, Linux shell scripting
Platforms & Infra: Linux, Kubernetes, Docker, Trino
Languages & Databases: SQL, SQL Server
Tools: Git

EXPERIENCE

Associate Software Engineer (Data Engineer) — Tech Mahindra *Apr 2025 – Present*

Project: DDS GDP Migration | Client: Standard Chartered Bank

- Migrate enterprise ETL workloads from a legacy Hadoop-based data platform to a modern cloud data platform, converting Hive-based pipelines into Spark and Apache Iceberg jobs, including schema/DDL changes across multiple country-specific datasets.
- Convert legacy batch job schedules into Apache Airflow DAGs as part of the orchestration migration.
- Diagnose and resolve Spark ETL job failures by analyzing logs, SQL errors, schema mismatches, and data quality issues to ensure successful pipeline execution.
- Contribute to root-cause analysis of a recurring Spark memory-related error affecting large-scale data merge jobs across multiple countries.
- Validate post-migration data accuracy and consistency, and support Airflow pipeline validation during release cycles.
- Maintain shell-script-based daily ETL staging load pipelines, including source/country whitelisting, date calculations, holiday calendar handling, and skip-condition logic.
- Work hands-on with Kubernetes pod operations in a Spark-based environment to support troubleshooting and migration execution.
- Collaborate with cross-functional teams on troubleshooting, environment setup, and migration execution across development, integration testing, and UAT environments.

Trainee Software Engineer — Tech Mahindra *Sept 2024 – Apr 2025*

- Completed structured training in .NET Core application development and SQL, including query optimization and debugging using Visual Studio, alongside foundational exposure to Git, Docker, and Kubernetes.

PROJECTS

Food Demand Prediction *(Decision Tree Algorithm)*

- Built a predictive workflow to forecast meal demand from historical order data, achieving ~75% accuracy.
- Analyzed seasonality and customer preferences to improve inventory planning and reduce test-dataset wastage by ~15%.

CERTIFICATIONS

- Microsoft Azure Data Fundamentals (DP-900) – Microsoft
- Azure AI Fundamentals (AI-900) – Microsoft
- GitHub Copilot Certification (GH-300) – GitHub

EDUCATION

B.E., Computer Science and Engineering — R.M.K College of Engineering and Technology 2020 – 2024
